

Lending Club

Consumer Credit Risk

Enterprise Data Science Bootcamp, NOVA IMS, 2026-27. Class dataset.

What this is

Lending Club was a US peer-to-peer lender. This is an extract of its public loan book: **331,865 funded loans issued between January 2014 and December 2018**. Each row is one funded loan, described as it looked at the time of funding, along with the loan's eventual outcome.

The extract was prepared upstream from the full Lending Club data, which runs from 2007 and has about 150 fields. Most of that history and most of those fields are not here. There is no file of rejected applications, so nothing in this data supports a claim about loan applicants in general, only about loans that were actually funded.

The file

lending-club.csv: 331,865 rows, 28 columns.

The data originally shipped as two files split by date. They have been merged into one, and a split column records where each row came from: **236,846 rows marked train** (issued January 2014 to June 2016) and **95,019 marked test** (July 2016 to December 2018). Nothing else changed, so you can recover the original split exactly from that column or from `issue_d`.

`loan_status` is the outcome, already reduced to a binary code: **0 means the loan was Charged Off or in Default, 1 means it was Fully Paid**. We removed loans still running when collecting the data, so there is no third category.

Data dictionary

Field	Meaning
addr_state	State supplied on the loan application.
annual_inc	Borrower self-reported annual income.
application_type	Whether the application is individual or joint.
dti	Debt-to-income ratio based on monthly debt obligations and self-reported income, excluding mortgage and the requested loan.
emp_length	Employment length as a number from 0 to 9 or 11; the coding is not documented and the value 10 does not occur. Treat as an ordinal.
fico_range_high	Upper bound of the borrower FICO range at origination.
fico_range_low	Lower bound of the borrower FICO range at origination.
home_ownership	Borrower home-ownership category: MORTGAGE, RENT, OWN, ANY, or NONE. Empty in 826 rows. ANY, NONE and the empty values occur only in test rows.
id	Lending Club loan/listing identifier. Unique across the whole file.
initial_list_status	Initial loan-listing status: w or f.
installment	Scheduled monthly payment. Computed from loan_amnt, int_rate and term by the annuity formula; it encodes int_rate and is an underwriting output.
int_rate	Interest rate assigned to the loan by Lending Club.
issue_d	Date the loan was funded, always the first of the month (for example 2014-01-01). Use it for the time-based split; do not use it as a predictor.
loan_amnt	Loan amount requested/listed after any credit-department reduction.
loan_status	Outcome, binary. 0 = Charged Off or Default; 1 = Fully Paid. Empty in 1,412 test rows (2018 Q4 vintages), which must be dropped.
mort_acc	Number of mortgage accounts.
open_acc	Number of open credit lines.
pub_rec	Number of derogatory public records.
pub_rec_bankruptcies	Number of public-record bankruptcies.
purpose	Borrower-selected category for the loan purpose.
revol_bal	Total revolving credit balance.
revol_util	Revolving balance as a percentage of available revolving credit.
split	Which of the two original files the row came from: train (loans issued January 2014 to June 2016) or test (July 2016 to December 2018).
sub_grade	Lending Club assigned loan subgrade (A1 to G5). An underwriting output. The coarser grade field is not in the extract.
term	Loan term: " 36 months" or " 60 months", with a leading space in the value.
time_to_earliest_cr_line	Time from the borrower's earliest credit line to the loan, in an undocumented unit (values from about 97,000 to 2.2 million). Not days, months or years at face value; treat as an ordinal. Replaces the earliest_cr_line date of the full data.
total_acc	Total number of credit lines in the borrower credit file.
verification_status	Income-verification status assigned by Lending Club: Not Verified, Source Verified, or Verified.
